Feedback comments	— Knowledge and Understanding : The proposal demonstrates a high level of understanding of health information exchange, digital health systems and interoperability within the United Arab Emirates. However, there appears to be a need for greater definition of which of the three proposed policies is intended to be the most focused on delivering improvements in care continuity, patient safety and care delivery efficiency. Criticality Use of relevant sources: The written proposal uses a wealth of sources supporting your points, including literature related to the adoption and evaluation of health information exchanges, methods for evaluating health information exchange, governance of health information exchanges, and health information exchange policy documents which are specific to the UAE. To further enhance the proposal, you should increase the critical depth of the proposal by comparing the competing perspectives related to the barriers to interoperability related to technical readiness, organisational readiness and trust/governance of the various health information exchanges. Structure and Presentation : This proposal is clear, well organized, and follows a logical sequence, from the statement of the problem through to the research questions, methodology, evaluation, expected artefacts, and conclusion. However, you could have improved upon the clarity of this section by identifying which portion of the research analysis will be most important to consider when synthesizing the quantitative and qualitative data. Presentation and Communication Skills : You also provide clear communication about this proposal in a professional manner, with appropriate terminology and explanations, which provides a solid foundation for understanding the policy context of the proposed research. Additionally, you have described the academic contribution and practical importance of this research proposal, but could enhance the quality of the proposal by specifically stating what type or degree of improvement would constitute a significant impact instead of just reporting the results.
